

Geronimo and Alligator Creeks Watershed Partnership

Meeting Summary 6 pm Tuesday, May 11, 2010 GBRA River Annex

Agenda Item: Review of Work Group Progress

- An overview of Work Group progress was presented to the stakeholders, bringing them up to date on individual work group activities.

Agenda Item: How Much Load Reduction is Necessary? An Introduction to Load Duration Curves

- An introduction to Load Duration Curves (LDC) was presented in order to explain to the stakeholders the method for determining how much reduction is necessary to meet the water quality goal for the watershed. Stakeholders were shown how to develop an LDC from flow data and water quality data, and how to “read” an LDC. Estimated load reductions were presented to the attendees, with the statement that these load reductions are draft and may undergo future revisions after a closer look at the data. Some group discussion followed.

The next several months of meetings for the group was discussed and the meeting was adjourned.
