

Come learn about...

Rainwater harvesting is an innovative alternative water supply practice that anyone can do. It can provide additional water that is collected and stored for a variety of uses such as landscape watering, wildlife and livestock watering, in-home use, fire protection, and stormwater control. You can start out with something as simple as a bucket or barrel, or scale up to multiple barrels, or a large storage tank system.

A **FREE** Rainwater Harvesting Class is being offered by the Geronimo and Alligator Creeks Partnership on **Tuesday, November 15, from 6-7:30 pm at the Irma Lewis Seguin Outdoor Learning Center, 1865 US Hwy 90, Seguin.**

Three rain barrels will be raffled off as door prizes! Also, an overview of happenings in the Geronimo and Alligator Creeks Watershed will be presented.

Please RSVP to Ward Ling at wling@tamu.edu or 979-845-6980 or go to www.GeronimoCreek.org for more information.
